

METAL HOLDING FRAMES

Premium Filter Pad Frames make changing filters quick, easy and very cost effective. They also provide the flexibility of accepting a variety of filter media to match the performance criteria of each application. The cost of each frame is recovered quickly since only the media is changed while the frames are reused indefinitely. Premium construction consists of a durable, corrosion resistant U-Channel frame and a heavy gauge expanded metal (Model PFE) or welded wire (Model PFW) support grid on the air leaving side. An optional double-hinged wire door on the air entering side provides maximum media support. All corners of the frame are precision mitered for smooth, even edges.

Product Applications

Premium Filter Pad Frames usually require no modification of the original system hardware. Use to replace typical framed filters.

Model PFE Frames

- ✓ Heavy expanded metal grid
- ✓ 24 gauge galvanized steel frame
- ✓ Double-hinged wire door (optional)

Model PFW Frames

- ✓ Durable 1x1 welded wire grid
- ✓ 24 gauge galvanized steel frame
- ✓ Double-hinged wire door (optional)

FEATURES / BENEFITS

- ✓ Premium heavy metal construction for long life
- ✓ Standard and custom sizes available
- ✓ Precision mitered corners for smooth even edges
- ✓ 24 gauge galvanized steel frames for strength and durability
- ✓ Optional heavy-gauge (.125" diameter ) wire door provides superior media support
- ✓ 1" and 2" thicknesses can accept a wide variety of synthetic and fiberglass media
- ✓ No modification of existing hardware required
