

PLEATED PANEL FILTERS

Lifetime Industries pleated panel filters are extremely durable and long lasting. The gradient density, 100% synthetic media is bonded to an expanded metal media support system, pleated and sealed in a double wall, high wet strength, beverage board frame, for superior strength and rigidity.

Product Applications

Lifetime pleated panel filters are used to upgrade from fiberglass or polyester flat panel filters or less efficient pleated filters. They can be used as a primary filter or as a prefilter to extend the life of more expensive high efficiency filters.

Product Highlights

- ✓ Multiple models/MERV efficiencies, choose the one that's right for your application
- ✓ Gradient density, 100% synthetic media, resists microbial growth
- ✓ Low pressure drop
- ✓ Superior service life
- ✓ Expanded metal media support
- ✓ Moisture resistant beverage board frame
- ✓ Extremely durable
